AutoDesk Civil 3D 2014 is a generation of AutoDesk's Civil engineering software that helps civil engineers design highways, bridges, railroads and other infrastructure projects. This software includes tools like Macaulay (for topographical maps), geosteering (to help align features to the ground), and hydraulics. This post contains:- -How to download and install this software; -How to activate it with product keys; -What you need for activation: xforce keygen or trial resetter; -The possible trial resetter issues. Civil 3D 2014 has been designed to work with three different industry standard data formats: -Albers projection (U.S. state plane coordinate system) -Topo Projection (equirectangular) -GIS Format (the file format used by MapInfo, ArcGIS, Google Maps, etc.) Civil 3D 2014 can read and write files in three different ways. - Albers Projection formatting (.dgn format) - this is the native civil engineering format of AutoCAD Civil 3D software and is generally used by GIS programs like MapInfo. Civil 3D 2014 reads only the .dgn file while some GIS programs actually create Civil 3D files from .dgn files. - Civil 3D Web Services (.dwg format) - this is an XML format supported by AutoDesk's Civil 3D Web Services. - GIS Format (.shp, .dbf, .prj, etc) Civil 3D 2014 uses three main coordinate system data types: -State Plane Coordinates -Geodetic Coordinates -Albers Projection (Map) coordinates and geographic coordinates (longitude and latitude). Civil 3D 2014 is a development of the previous version of the software: AutoCAD Civil 3D 2013. Civil 3D 2014, as a Civil engineering software, provides a wide range of tools for engineers to design and manage projects. Civil 3D 2014 has been designed with ease of use in mind. Civil 3D 2014 follows the guidelines set by other software giants such as Autodesk and Microsoft in designing its user interface. However, it is not as easy as other software packages.
